

Release 1.0 Acceptance Documents  
CryptoTracker  
CryptoTracker Developers  
Release: 03 - 16 - 2018  
v1.0.0 "Wagyu"

Release 1.0 Acceptance document including: A list of user stories or usage scenarios that cover the functionality of your Release 1.0 product (which you claim are working) A list of known bugs and restrictions No penalty for known bugs

**User Stories/Usage Scenarios that work:**

**Sprint 1:**

- As a user, I want to track the price of Bitcoin
  1. Log in using Google authentication
  2. Redirect to Home Page
  3. On the Home Page, it will display 100 different cryptocurrencies and their prices

**Sprint 2:**

- As a user, I want to be able to track the prices of all cryptocurrencies
  - As stated above, we have a Homepage that shows 100 different cryptocurrencies and their prices
- As a user, I want to view prices in an easy to read format
  - We were able to use UIKit for an easy to use formatting

**Sprint 3:**

- As a user, I want to be able to link my Google Account to personalize my profile.
  - If you navigate to the Landing page and input your credentials in the Google Sign in.
- As a user, I want to be able to see cryptocurrencies I've favorited
  - Navigate to the account Page and you can check the checkbox next to the cryptocurrency you want to favorite
  - Heading over to the dashboard, you can view your favorited coins
- As a user, I want to be able to edit my favorite cryptocurrencies
  - You can choose to remove selected coins

**Sprint 4**

- As a developer, I want to have a clean and easy to navigate web application (8)
  - We used UIKit to make formatting a little easier
- As a user, I want to be able to compare the different attributes of cryptocurrencies (5)
  - We set up a page to compare the info pulled from API of two currencies
- As a user, I want to be able to buy the cryptocurrency I am interested in using links on the website (5)
  - We attached links on the homepage to every single Cryptocurrency as to where to buy them or information to buy them.

**Known Bugs:**

- If Google API does not load quickly/ in time of logout, there will be an error displayed on the window upon logout.
- If attempting to log out of any page but Home, there will be a Google API error and the log out will not work successfully.
- Home will log out with the error if being redirected from another page.
- Google API will not load quickly depending on some connections and devices.
- Cannot save user data after log out if logging onto a different user, then logging back.
- If not using a Google Account, cannot display user data currently.
- Current create account field does not actually link to our page and display a user. Just sends data to Firebase database.
- On Account Logout, there is an occasional JSON error when attempting to log out due to JSON attempting to parse a null value.
